

WHY ADAPTATION FOR YOUR ORGANIZATION IS MORE IMPORTANT THAN EVER - EXECUTIVE SUMMARY

In today's rapidly changing business environment organizations are struggling with how to adapt to volatility, identify new opportunities and maintain a competitive advantage. As Darwin once said 'It is not the strongest of the species that survives, nor the most intelligent that survives, it is the one that is most adaptable to change'. This is now true for corporate survival; adapt the way you adapt, or die.

VistaShift A.I. Advisor is the needed solution for companies to survive in this unpredictable business climate. VistaShift A.I. Advisor is an agile, scientific, proven software developed to help organizations adapt to relentless change, without interrupting the daily flow. With VistaShift business challenges are solved much more rapidly and cost effectively than traditional methods. By using perspective taking, VistaShift's process helps organizations with aligning corporate frames, customer centricity and ambidexterity.

This superior approach involves organizations reimagining and reinventing the way they do things; the way they see, plan, and act so they can step up to the next evolution.

See: The inclusive process takes the politics, silos, blind spots and bureaucracy out by gathering structured input from strategically relevant internal stakeholders. The team's input is analyzed and the outcomes are given back in a way that opens up new possibilities. Because the insights come from your team, they own the outcome and that clears the way for seeing and embracing the change that needs to happen. This alone is transformative. The process then enables organizations to validate the new shift in vision with external stakeholders, adjust and socialize it through the organization. The organization's outlook is aligned with the changes in your business ecosystem that pose threats and offer advantages.

Plan: On the basis of your new vista, VistaShift A.I. Advisor enables the development of actual workable plans, illuminating the blind spots and getting the organization on board.

Your organization is then ready to **Act** by implementing the outcomes within their department.

Your team can then **Step Up** together. Collectively they have shared knowledge and perspectives, intelligent consensus and increased staff capability. The organization is aligned in their thinking, language and behaviour. They are now at a higher viewpoint and have naturally adapted without interrupting the daily flow.

The See, Plan, Act and Step Up Process is repeated for each challenge. Each time it reduces the gap between your understanding and ever changing reality. This is what VistaShift calls Reinventing Doing. It is reinvention without interruption.

VistaShift A.I. Advisor has the ability to diagnose alignment issues inside and outside the organization, encourages innovation and empowers team members to problem solve effectively.
